Abstract (en)
[origin: EP1143116A1] The movement of the inlet valve in opening or closing w.r.t the valve seats (10,13), is controlled using an electromagnetic actuator (15), while that of the exhaust valve is controlled by an assembly (16) including a lever (28) controlled by a cam (27) shaft (26), this assembly being independent of the electromagnetic actuator. The IC engine has an inlet valve (6) and an exhaust valve (7) co-operating respectively with valve seats (10,13) fitting on the cylinders (2).
