Abstract (en)
[origin: WO0037014A1] Absorbent product such as an incontinence pad, sanitary pad or napkin, diaper or other absorbent product for absorbing body exudate, comprising (i) an attachment system associated with one or more adhesion means and designed to be adhered to and released from a user's undergarment with a release force of between 1.9 and 3 N, and (ii) a protection system releasably adhered to the back sheet of the absorbent product and which can be released with a release force of between 0.5 and 1 Newton. The adhesion means is preferably a pressure-sensitive adhesive and the surface weight of adhesive applied on the back sheet is 40 g/m² or lower. An easy and convenient release of the release paper from the absorbent product or of the absorbent product from the user's undergarment is thereby provided whilst still providing a secure fastening of the product with respect to a user's undergarment.
