Abstract (en)
[origin: EP0987190A1] The closing cap has a bulge (6) in the transition region (7) between the cap top (2) and the cap skirt (3) to press a sealing washer (5) against the container mouth. The bulge has an undercut (8), and is divided into sectors by weakening points (10) to give the bulge radial flexibility. The undercut may extend into a region spaced out from the inside (15) of the cap top.
