Abstract (en)
[origin: GB2349128A] A method and apparatus for wrapping articles (21, fig.1) or grouped articles, such as confectionary or tablets comprises a wrapping material, dispensed as a sheet eg. from a roll (10, 10A, fig.1) with pre-applied cold seal adhesive 34A, 34B, on opposite faces which are brought together without folding, for the adhesive to create a lap seal. The adhesive may take the form of layers or strips or two strips along opposite edges of opposite faces of the wrapping sheet. The articles may be presented at 90° to, and the axis of the seal may be parallel to, the dispensation direction of the wrapping sheet. The wrapping material may be laminated eg. a layer of paper 30 and a layer of polyethylene 33, printing 35 may be applied to the paper layer and a sealing layer 36 incorporating a release agent or having a surface to which cold seal adhesive will not stick. Hot sealable coatings may also be applied.
