Abstract (en)

[origin: US6622865B1] An apparatus provides for increasing storage stability of substrate portion which is provided with a self-adhesive layer covered by a carrier layer and which are packed in bags. The adhesive layer is protected by the carrier layer which projects beyond the self-adhesive layer, at least in some areas. The adhesive layer is protected from adhesive bonding with packaging material of the bag in that in projecting regions, on a side of the carrier layer assigned to the substrate portion, there are arranged elevations, fixed to the side or shaped out from it, as spacers with respect to the bag, and, in addition to the elevations on that side of the carrier layer which is assigned to the substrate portion, elevations designed as spacers are arranged on an opposite side of the carrier layer.
