Abstract (en)  
[origin: WO0078880A2] The invention relates to a composite profile (1) comprising a sealing profile (3) and an adhesive tape (2), whereby the adhesive tape (2) has a flexible support layer (4) made of a foam. A first adhesive layer (6) that is covered by a removable liner (7) is disposed on a first surface (5) of the support layer (4). A second surface (8) of the support layer (4) is located opposite the first surface (5). The second surface (8) is connected to a counter surface (9) of the sealing profile (3) by means of a second adhesive layer (10) with the purpose of forming a composite profile (1). The second adhesive layer (10) consists of a crosslinked reactive holt-melt type adhesive.
