Abstract (en)
[origin: WO0032856A1] A method for cutting fibres into pieces, wherein a fibre is divided into pieces by pressing a knife against the fibre without exerting a substantial counterpressure on the other side of the fibre where the knife is present. The fibre is led between a knife roller, which is fitted with several, substantially axially oriented knives, and a pressure roller, which rollers are driven in opposite directions at the same peripheral velocity. The fibre is thereby clamped down between the pressure ribs, which are present between the knives on the knife roller, and the pressure roller, wherein a knife cuts through the fibre substantially without counterpressure from the pressure roller.
