Abstract (en)  
[origin: WO0039404A1] A barrier forming a two-row traffic divider or a lateral barrier for an artificial trench, comprising a continuous deformable structure (3, 3'; 13, 13'; 23, 23') including a plurality of modules which are mutually connected and are simply laid on the curbstone or pavement. The deformable structure allows the calibrated deceleration of the light vehicles. In case of a barrier formed by a two-row traffic divider, a central container (1) stops the movement of a heavy vehicle, while the same effect is obtained by means of the toe wall (16) in case of a lateral barrier.
