Abstract (en)

[origin: DE19951116A1] The relay has a coil (13) which causes an armature (22) to move, to operate a contact element (37) on which a control rod (31) is arranged. A coupling member (46) connects the control rod to the armature allowing limited displacement. The armature may be moved to a position in which the relay is switched on when the coil is supplied with current, such that the contact element makes contact with a corresponding relay contacts.
