Abstract (en)

[origin: DE19832911A1] The invention relates to a device for transmitting signals and energy in a vehicle, comprising an antenna coil (10) disposed in or on a movable part (16). A coupling coil (12) is mounted in the vicinity of the antenna coil (10) on a part (20) that is stationary in relation to the movable part (16) in such a way that the antenna coil (10) and the coupling coil (12) can exchange energy and signals by means of inductance/transformation.
