Abstract (en)

[origin: WO0042748A1] An electronic document delivery system that enables exchange of digitally signed and public key encrypted packages without requiring pre-installed specialized public key security software applications on recipient's computer. A URL identifying such a package is sent to the recipient by e-mail. Upon submission of the URL through the World Wide Web, computer instructions in the form of an applet, for example, are sent to the recipient to effect retrieval and processing of the package. Such processing can include decrypting one or more parts of the package and verification of a signature of the package.
