Abstract (en)

A flexible container for products to be kept separate and mixed before use, made of single-layer or multi-layer plastic material comprising two compartments (11, 12), intended to contain respective products which are kept separate and mixed before use by breaking a line of separation between said compartments, in which the line of separation is obtained by means of a strip (15) of easy-open material interposed between the walls (13, 14) of the container and extending from one side to the other thereof, so that a weld made along said strip (15) is not permanent, but can be broken upon exceeding a certain force. <IMAGE>
