Abstract (en)

[origin: EP1146180A1] The method involves making rigid support elements by inserting a reinforcement frame (A) with at least one upper flange (8) and at least one lower flange (9) connected by diagonals (10) to define penetration faces (11) in a mould. Mould cores are inserted in the through the penetration faces and concrete is poured into the mould. The mould cores are removed. The support elements are inserted in a shell and a concrete shell plate is cast. An Independent claim is included for a concrete roof element made using the method.
