Abstract (en)

A method to transmit an information service in a broadcast transmission system, wherein said information service is logically fragmented into data fragments which build together with corresponding signalling information respective broadcast objects which can be transmitted independently from each other comprises the following steps: - mapping of an ID of a broadcast object which is included within said signalling information to a header according to a broadcast file transmission protocol; and - mapping of the data fragment included within said broadcast object to an object body according to said broadcast file transmission protocol which corresponds to said header. <IMAGE>
