Abstract (en)
[origin: WO0044251A1] A magnetic insole (100) having sufficient magnetic strength and placement of the magnet (12) to allow the magnetic force to render a therapeutic effect on the wearer is provided. The magnet is of sufficient strength to generate a magnetic field of 500 Gauss at a distance of about five centimeters from the surface of the magnet. Within the finished insole, the magnetic is positioned such that the magnet will be in the area which receives the least amount of foot pressure during use by the wearer. Methods of manufacturing the molded magnetic insoles of the present invention are also provided.
