Abstract (en)
[origin: US6457469B1] The invention relates to a device for cutting slabs or tiles, comprising a frame which has a support surface for the slabs or tiles and a cutting mechanism which is displaceably mounted on the frame, above the support surface, in order to produce a point of break in the surface of the slab or tile. According to the invention, guiding elements are provided for guiding the cutting mechanism along a curved path while it is displaced on the frame.
