Abstract (en)

[origin: WO0127340A1] The invention concerns a method for making a low carbon and low manganese cold rolled steel strip for deep-drawing whereby a steel strip hot rolled in the austenitic region coiled at the end of the high temperature hot rolling process ($680 \text{ DEG C} < T < 750 \text{ DEG C}$) is subjected to a cold rolling process with a reduction rate between 65 and 80 %, and finally subjected to an annealing and overageing heat treatment. It consists in heating the steel strip at a heating rate V_h ranging between 150 DEG C/s and 1000 DEG C up to the annealing temperature T_a ranging between 650 DEG C and 750 DEG C, and in maintaining it at said annealing temperature for a time interval between 1 and 20 seconds, then in cooling it at a cooling rate V_c between 100 DEG C/s and 500 DEG C/s up to an overageing temperature T_{oa} ranging between 150 DEG C and 450 DEG C.
