Abstract (en)

[origin: FR2789128A1] The invention concerns a method which consists in: successively carrying out the normal operating phases of the turbo-machine (3) during which in the turbo-machine (3) intake, only process gas is introduced and cleaning phases during which is introduced in the process circuit (1), at the turbo-machine (3) intake (4), a substance in dense state such as CO₂, supercritical substance capable of dissolving the impurities. The cleaning can be performed with or without continuous recuperation of the substance in dense state dissolving the impurities.
