Abstract (en)

[origin: DE19902951A1] The induction device has a line sector through which the induction medium flows, connected to at least one non-through-flow cavity by an aperture (19), this forming a resonance tube (11). The resonance tube has a common wall sector (13) with the line sector. The line sector and resonance tube may be integrated into an extruded strip with closing pieces at the ends.
