Abstract (en)
[origin: WO0042349A1] A gas appliance comprises a stand (12) and a gas emitter (44) supported by the stand, the gas emitter being provided with means whereby it can be coupled to a gas bottle (18), for the supply of gas from the gas bottle to the gas emitter. The stand comprises three or more legs (14) spaced peripherally about a space (16) in which the gas bottle (18) can be accommodated. A skirt (34) of flexible sheet material encloses the space, the skirt having a sliding clasp fastener (40) to provide access to the space. Anchoring means (20, 22, 24) is provided, whereby the gas bottle can be suspended from the stand so as to hang in the space. The anchoring means includes a lifting device (24) for lifting the gas bottle from the ground.
