Abstract (en)

[origin: US6536150B2] The bolt assembly includes a bolt head having a locked position and an unlocked position. The bolt head also has a periphery and an even number of arrangement sites located on the periphery. The bolt assembly further includes a plurality of locking projections positioned at a subset of the arrangement sites on the periphery of the bolt head. It also includes a cartridge extractor disposed at one of the arrangement sites which is not part of the subset and which is located horizontally adjacent the central longitudinal axis of the barrel when the bolt head is in the unlocked position.
