Abstract (en)

[origin: US2001052148A1] A bottom element for a shower for collecting and draining the water is designed as flat, horizontal stone plate made in one piece, particularly to be built as a smooth continuation into an adjacent floor area. This stone plate has depressions, particularly grooves in the surface, starting out from the border of the stone plate leading towards a drain, e.g. towards a vertical bore traversing the stone plate. These depressions or grooves can be inclined towards the drain.
