Abstract (en)
[origin: EP1148000A2] The container has a withdrawable locking protrusion(3) which is pretensioned in its extended activated position, and in this position, with the cover closed, engages with a locking recess(4) so that the cover(2). The lock protrusion is withdrawn from the recess by the simultaneous action of two childproof operating elements. The cover is a swing lid pivotable around a horizontal axis and which after a dead centre position has been passed during the closing motion automatically moves into the fully closed position as long as the locking protrusion is de-activated.
