Abstract (en)

[origin: EP1148165A2] The stitch length control mechanism is supplied with correction values which are a function of rotary speed. Preferred features: Supply of speed correction values to the stitch length control mechanism, is continued during formation of stitches remaining in a run. Correction values are entered in tabular form into a data memory, and are read out by the computer. Values of the adjustment characteristic related to stitch length, are entered in tabular form into the data memory. In the computer, the correction values, a function of rotary speed, and the values of the adjustment characteristic related to stitch length, are associated with each other.
