Abstract (en)

The present invention provides a communication system, a vehicle-mounted communication system, a communication device, and a vehicle-mounted device, which can easily and simultaneously set plural devices which are connected by a network. A communication terminal server (11) comprises a storage medium interface (112) to or from which a storage medium (111) can be inserted or removed, and each of devices (12a to 12c) comprises a control means (122) for controlling reading of setting information (115) from the storage medium (111) which has been inserted into the storage medium interface (112) of the communication terminal server (11) or writing of the setting information (115) to the storage medium (111), via a network (15), and a setting means (124) for setting the self-device on the basis of the setting information (115) read from the storage medium (111). <IMAGE>
