Abstract (en)
[origin: WO0045724A1] The bone screw consists of a biocompatible material with a threaded front part (1), a non-threaded back part (2) and a non-threaded shaft part (3) located in-between said parts. Part OAg of surface Otot of the bone screw is fitted with a silver coating encompassing at least partially the non-threaded shaft part (3). The remaining surface (Otot-OAg) comprising at least the threaded front part (1) is not coated. Said bone screw prevents the occurrence of infections.
