Abstract (en)

[origin: DE19902453A1] The arrangement has parallel timed first and second circulating conveyors (11,15) for the objects (1) and boxes (2), an insertion rod (40) movable perpendicularly to the transport direction and a covering tongue (58) that can be moved up and down and deployed transversely to the transport direction into the box openings to transfer objects into boxes with the conveyors stationary. The insertion rod and covering tongue are coupled to at least one servo motor (32-34) that produces the movements of the insertion pin and covering tongue.
