Abstract (en)  
[origin: WO0034600A1] A lead-in for mounting in a membrane (3), e.g. an underroof, and comprising a tubular member (1) connected with a flange member (2), the tubular member (1) being adapted to fit into a cut-out in the membrane (3) in such a manner that the flange member (2) overlaps the membrane (3) around the cut-out. The tubular member (1) further comprises a first circumferential groove (4) for the positioning of an annular sealing (3), such that the sealing, when the tubular member (1) is positioned in the cut-out of the membrane, in the vicinity of its exterior periphery (6) may be brought into abutment with the membrane (5) and press the membrane against the flange member (2).
