Abstract (en)

[origin: WO0138739A1] The invention relates to a device for delivering fuel out of a fuel tank to an internal combustion engine, whereby a pump chamber is configured in the housing (2) of the delivery device (1). Displacement elements (6), which are rotationally driven, are accommodated in said housing (2). Borings (11, 12) are located on the shaft (8) that accommodates the displacement elements (6). One end (9) of the shaft (8) is connected to the induction side (17) of the delivery device (1) via said borings.
