Abstract (en)

[origin: WO0038462A1] The invention concerns a mobile station comprising several receiving units for processing, in macrodiversity mode, respective radio signals transmitted by several distinct base stations and bearing an identical information. When predetermined conditions are fulfilled, the method consists in relinquishing at least partially the macrodiversity mode for the mobile station; commanding one or several base stations to transmit to the mobile station radio signals bearing different data, and controlling the mobile station so that its reception units process said radio signals to receive said different data.
