Abstract (en)

The invention relates to a device for forming a profiled edge on one end of a round tubular member (9). The device comprises a tabletop and two cooperating profiling rolls (7,8) which project above said tabletop. The device furthermore comprises two guide rollers (12,12') for the tubular member (9) which guide rollers (12,12') engage the wall of the tubular member during operation at points located at least substantially opposite each other, and wherein the axis of rotation of at least one of said guide rollers includes an angle deviating from 90 DEG with the upper surface of the tabletop. <IMAGE>
