Abstract (en)

[origin: EP1149671A1] The system is designed so that the sprocket (12) of the first roller (9) projects in the axial intermediate spaces of the sprocket (13) of the second roller (9'), and the teeth (16,17) of the sprockets (12,13) are arranged radially outwards, and so that the first roller (9) rotates slower than the second roller (9'). The teeth pitch of the sprocket (13) of the second roller (9') is larger than the pitch of the sprocket (12) of the first roller (9).
