Abstract (en)

[origin: EP1149785A1] A print machine transporter for a sheet (11) of printed paper has two facing drums (3,4) with outer faces (13a,27a). The drums incorporate rollers (13,27), each of which accelerates paper in the direction (25) of paper carrier (2) motion. The roller (13,27) rotation axis are inclined towards the direction (25) of carrier (2) motion, accelerating the sheet (11) against the direction of drum rotation (24). The rollers (13,27) reduce the speed of sheet (11) discharge and accelerate them in the direction of the carrier (2).
