Abstract (en)
A locking arrangement (10, 11) including a manually actuatable element (12, 160) connected via a transmission path to a latch assembly (13, 113), the latch assembly having unlocked locked and superlocked conditions, the latch assembly being moveable between the unlocked locked and superlocked conditions by operation of an actuator (42, 142), the latch assembly being moveable between the unlocked and locked conditions by operation of the manually actuatable element, the transmission path including resilient means (38, 138) to limit the force applied by the manually actuatable element when the manually actuatable element is operated to attempt to move the latch assembly from its superlocked condition (Figure 7). <IMAGE>
