Abstract (en)

A connector (10) for an automobile airbag gas generator assembly requires only a single operator action to establish both mechanical and electrical engagement with a mating socket connector (26) and three independent operator actions to disengage the connector from the socket connector. A further embodiment of the connector of the present invention provides a clamshell housing (212) and cover (214) to the connector thereby allowing an installer to terminate electrical conductors directly to the contacts within the connector. The connectors of the present invention may support either a inductor coil or a ferrite bead for suppressing induced currents. The connector of the present invention may terminate both standard round cables and flat cables. <IMAGE>
