Abstract (en)  
[origin: WO0047088A1] The invention relates to an arrangement (101) for holders (102) intended to support objects along a panel, in conjunction with which a number of carriers (105), each of which is so arranged as to be capable of detachable attachment to only a single holder (102) at a time, are so arranged as to be secured at intended points along the aforementioned panel. The holders (102) exhibit a width which corresponds essentially to the width of the carriers (105) and exhibit means for securing them to the panel. The holders (102) exhibit on their front side (110) an accommodating opening (111) which is angled internally inside the holders (102) so as to extend in the form of a slot (112) in an upward direction. The carriers (105), which are attached to the objects in question, exhibit attachment parts (117) and counter-pressure parts (119) extending in a direction respectively upwards and downwards from a horizontal (114) connecting part.
