Abstract (en)  
[origin: DE19903906A1] The invention relates to a machine tool (1) comprising a foundation (2) and at least one control cabinet (3). The control cabinet is positioned so far behind the rear end of the machine tool that a service passage (5) for service personnel is formed between the machine tool (1) and control cabinet (3). The control cabinet can be immovably connected to the machine tool via a control cabinet frame (9). Said control cabinet frame presents means for fixing the control cabinet in at least two positions. In the first position a service passage (5) is provided for between the machine tool and the control cabinet (3), while in the second position the control cabinet (3) is situated as close as possibly to the machine tool. The second position can be used for transport and/or to obtain a machine tool having a small base.
