Abstract (en)
[origin: US2002030032A1] A packaging means includes a first member, in particular a container (1), a tube or a bottle, having a peripheral wall (4) which is flexible at at least a portion thereof in a direction perpendicularly to the peripheral direction and a second member in the form of a bandage (2) which encompasses the peripheral wall (4) and comprises first inter-engagement means (30, 31) which can engage in complementary first inter-engagement means (11, 12) on the peripheral wall of the first member (1) whereby the bandage and the peripheral wall are jointly deformable in the direction perpendicular to the peripheral direction. The bandage (2) may consist of a synthetic material having a softer surface texture than that of the synthetic material of the peripheral wall (3).
