Abstract (en)

[origin: WO0036380A1] An improved network flow system includes an Internet/intranet enabled network flow computer with at least one flow measurement device and a host computer capable of communicating using Internet technology or through local connection to the flow computer. In one embodiment, the Internet enabled network flow computer receives flow measurement data, in raw or calculated form, from one or more measurement devices. The host computer connects to the network flow computer via the Internet, an intranet or local connections. The host computer transmits or receives data from the network flow computer, including the capability to view flow data results in web page format on the host computer and the capability to remotely or locally configure and control the flow computer from the host computer.
