Abstract (en)

[origin: GB2346507A] A method of selecting a network in a cellular communications system comprising a plurality of networks in which a user transmits a resource query identifying a service and a service provider to different networks, the networks acquire service provider resource functions from the service provider and determine a respective network resource function applicable to that network for delivery of the service <1>via</1> a further communication element (such as a landline link) and a respective overall resource function incorporating the network and service provider resource functions, networks transmit their overall resource functions to the user and the user selects whichever network has the optimum overall resource function. One applicable resource is cost.
