Abstract (en)

[origin: EP1151691A1] The device has a bearer column part and a cantilever arm part ending in a treatment head section. A housing joined to the column part has at least hot air and steam sources. The arm carries a delivery head communicating with the devices in the housing and able to turn between end positions. The head has a diffuser section with output holes for at least one medium on one side and medium output ports on the opposite side for connecting hair curlers. The device has a bearer column part (1) and a cantilever arm part (8) ending in a treatment head section(12). A housing (7) joined to the column part contains at least one hot air source (9) and at least one steam generator (11). The arm carries a delivery head (15) communicating with the devices in the housing and able to turn between end positions. The head has a diffuser section with output holes for at least one medium on one side and medium output ports on the opposite side for connecting hair curlers.
