Abstract (en)
[origin: EP1151693A1] The packaging which comprises an applicator which includes an application part (25) and a container able to be closed. The container defines a first housing (2) for the product (P) and a second housing for receiving the application part. The two housings communicate through an opening which enables the application part to be put in contact with the product. The second housing defines a bearing surface (7) around one part of the opening so as to limit the pressure able to be exerted by the application part on the product when the container is closed.
