Abstract (en)
[origin: EP1151737A2] Described is an undercarriage comprising two bearing arms which extend parallel to each other and near at least one end thereof are each provided with a rotatable wheel, which bearing arms are connected to a first carriage part in a rotatable manner, and the bearing arms are interconnected at a distance from the first carriage part by a first substantially rigid connecting arm which is connected to the two bearing arms in a vertically pivoting manner. The connecting arm is connected to the carriage, with the interposition of at least one spring element. An undercarriage for such a wheelchair is also described. <IMAGE>
