Abstract (en)

[origin: EP1151833A2] A movable shelf which supports a marginal zone of a sheet is moved by actuators. A sheet gripper (15,16) which travels with the shelf during its displacement grips a sheet marginal zone. The sheet gripper is connected to the shelf by an articulation comprising several levers (10,18) forming a parallelogram articulated about horizontal pivoting axes (11,13,17,19). A permanently compressed spring piston (24) eliminates radial play of the pivoting axes and a transverse leaf spring eliminates lateral play.
