Abstract (en)

[origin: EP1151951A2] On reaching a set number of thread joining operations, in relation to a predetermined reference thread length, the winding process is stopped and the length of wound thread concerned, is removed from the cross winding bobbin (4). Preferred features: The reference length with an excessive number of joins, is disposed of through a suction nozzle (22) at each working location. The suction opening (23) accepting the thread (27) for disposal, is swung in close to the surface (20) of the cross wound bobbin
