Abstract (en)

[origin: EP1151957A2] The support has a support cylinder that acts vertically to lift the crane from the track or replace it. The support forces are distributed by supporting each support cylinder on a support plate. Each support plate is in two parts with a lower horizontal base plate (3) that fits on the ground and an upper sliding plate (1). The upper side of the sliding plate has holders (3) for the support cylinder (10).
