Abstract (en)  
[origin: EP1152385A1] The support (11) of the information panel or sign device has a component (12) and edging (13) vertical to it with an inner surface (15). A plate (17) has side edges and is so insertable in the edging (13) of the support that its side edges are opposite to the side surfaces of the edging. In the side edges of the plate are recesses (18). The edging of the support is elastically formed. On the inner surface of the edging are projections (16) for releasable snap engagement with the recesses in the side edges of the plate. The support component (12) is frame-shaped. The support (11) is in the form of a rectangle.
