Abstract (en)
[origin: EP1152641A2] The oven has at least one microwave source and a hollow volume resonator (2) with a device for coupling a microwave field in and out of the resonator. At least one microwave susceptor element (10) at a defined distance from and alignment to the material to be heated (20) is heated by the microwaves and gives off heat to the material. The source and/or resonator is controlled to produce a strong microwave field at the material and/or susceptor.
