Abstract (en)

[origin: WO0037703A1] The invention relates to a method and device for thermally coating the surfaces of an inner area, especially the cylinder bearing surfaces of a cylinder crankcase. The cylinder crankcases are fed to a processing station where the surfaces to be coated are pretreated and said surfaces are then thermally coated. The areas of the cylinder crankcase that should not be treated in said processing station are covered (masked) before pretreatment and/or coating is carried out.
