Abstract (en)

[origin: WO0047945A1] The invention relates to a missile (4) comprising one or more hollow charges, a rocket motor (5) with horizontal stabilizer (6) and a warhead (7) for combatting vehicles with active self-protection. The invention provides for a self-propelled, removable device (9) to be arranged on the missile tip, which becomes detached from the missile (4) at a suitable distance from the target, flies ahead of the missile (4) and triggers the active self-protection such that said self-protection does not endanger the succeeding missile (4).
